

Fingerprint Cards AB (publ) comments on Samsung as potential new smartphone OEM-customer

Fingerprint Cards AB (Fingerprints) delivers fingerprint sensors within the context of a production project, which likely means that Fingerprints' technology will be included in a Samsung smartphone model, the Galaxy A10s, which was launched in August. However, there is also a possibility that technology from alternative suppliers will be used.

Fingerprints has received orders and delivered sensors within the context of this project. The extent to which this product launch will affect Fingerprints' sales and earnings will be reported in the usual way in the company's future financial reports.

Fingerprints is also working on an additional production project that could potentially lead to Fingerprints' technology being included in another future model from Samsung.
